- Protect Your Home & Outdoors

209-W

209-W1G

PRO TIPS

STEP 1

Clean the room. Remove clutter and vacuum everywhere because crevices that are free from particles will be better able to accept insecticides. Don't forget to empty your vacuum immediately into a plastic bag and seal tightly so the trapped bed bugs do not re-infest your home. Dispose of bags properly as soon as possible.

STEP 2

Remove your bed linens and launder them in hot water. (If a comforter or other bedding cannot be washed, heat in dryer at highest heat for at least twenty minutes until bugs are killed.) Wash and dry clothes and place them in black trash bags. Seal them to control any bedbugs (eggs, larvae and adults) until you have treated the room.

STEP 3

Dismantle everything! When the room is down to the basic furniture, remove drawers from desks and dressers and take apart bed frames. These actions can expose bedbug hideouts.

STEP 4

Spray Kills Bed Bugs on the target locations along with other areas listed on the label to provide quick knockdown and up to 12 weeks residual protection. This product **KILLS BED BUGS, EGGS And LARVAE!**
